

■ M.O.R.E. Maximizing Project Success ■

Traditionally, project success has been measured through the "iron triangle" consisting of scope, time, and cost. PMI's Maximizing Project Success research reframes this definition, establishing that true success is actually value that is worth the effort and expense. This course provides project professionals with a practical playbook to deliver M.O.R.E.—a mindset and methodology designed for sustainable project value.

☀ Overview ☀

- Focus** : Redefines project success as *value worth the effort and expense*.
- Approach** : Interactive playbook blending self-assessment, reflection, and real-world insights.
- Goal** : Equip project professionals to deliver sustainable value beyond traditional measures of scope, time, and cost.

The Four Pillars:

Manage Perceptions : Actively shapes stakeholder understanding of value throughout the lifecycle of the project.

Own Project Success: Shifts accountability from merely crossing off tasks to delivering genuine tangible and perceived value.

Relentlessly Reassess: Mandates frequent adaptation of goals and parameters to successfully navigate continuous change.

Expand Perspective : Encourages looking beyond immediate deliverables to evaluate enterprise, ethical, and societal impacts.

The Impact & Opportunity

Project professionals who master and apply all four elements achieve a striking Net Project Success Score of 94 out of 100. However, a significant performance gap exists, as research indicates that only 7% of professionals currently leverage all four elements in their day-to-day work.

The M.O.R.E. Framework

The framework shifts the focus away from the traditional constraints of time, cost, and scope, evaluating success instead by whether the delivered value matches the effort and expense invested.

M - Manage Perceptions

Definition : Project success is heavily dependent on how stakeholders perceive the final outcomes.

Key Practices:

- Communicate proactively and transparently.
- Align expectations early and revisit them often.
- Build trust through consistent updates.

Student Reflection : How do I currently manage stakeholder expectations? Where can I improve clarity?

O - Own Project Success

Definition : Accountability for the project lies directly with the project professional, not with external circumstances.

Key Practices:

- Take responsibility for both outcomes and value delivery.
- Celebrate achievements and acknowledge setbacks honestly.
- Demonstrate leadership by modeling ownership.

Student Reflection : What does "owning success" mean in my current projects?

R - Relentlessly Reassess

Definition : Continuous evaluation is required to ensure ongoing relevance and resilience.

Key Practices:

- Use feedback loops to monitor progress.
- Reassess risks, opportunities, and stakeholder needs regularly.
- Adapt plans quickly when conditions change.

Student Reflection : How often do I reassess project direction? Do I act on new insights?

E - Expand Perspective

Definition : Success is not limited solely to immediate deliverables; it includes long-term strategic and organizational impact.

Key Practices:

- Connect project outcomes to broader business goals.
- Consider long-term sustainability and stakeholder ecosystems.
- Think beyond the project to enterprise value.

Student Reflection : How does my project contribute to organizational strategy?

Learning Approach

1. **Interactive Playbook** : Combines structured exercises with real-world case studies.
2. **Self-Assessment** : Encourages deep reflection on personal strengths and areas for growth.
3. **Practical Insights** : Bridges the gap between theory and actionable strategies for everyday project environments.

Benefits for Students

- Gain a modern definition of success rooted directly in value creation.
- Learn to navigate stakeholder perceptions effectively.
- Develop resilience through continuous reassessment.
- Strengthen leadership by taking ownership of outcomes.
- Broaden strategic thinking by expanding perspective.

Key Takeaway

Delivering M.O.R.E. means reframing project success into sustainable value creation that deeply resonates with stakeholders, organizations, and society. It empowers project professionals to move past mere task completion toward driving meaningful impact.

<u>Letter</u>	<u>Principle</u>	<u>Meaning</u>	<u>Student Application</u>
M	Manage Perceptions	Shape and align stakeholder expectations	Communicate clearly, check assumptions, build trust
O	Own Project Success	Take accountability for outcomes and value delivery	Be proactive, accept responsibility, celebrate wins
R	Relentlessly Reassess	Continuously evaluate progress, risks, and opportunities	Use feedback loops, adapt plans, stay flexible
E	Expand Perspective	Look beyond immediate goals to broader organizational impact	Connect to strategy, consider long-term value

Core Idea

- Project success is not just about completion — it's about impact.
- Delivering M.O.R.E. ensures projects create value that justifies the effort and investment.

Handbook Reflection Prompts

1. Which of the four principles (M, O, R, E) do I practice most naturally?
2. Which principle challenges me the most, and why?
3. How can I apply the M.O.R.E. framework in my next project to maximize value?

Reflection Prompts with Answer

[1.] Which of the four principles (M, O, R, E) do I practice most naturally?

Example Answer:

I practice **Manage Perceptions (M)** most naturally because I prioritize proactive communication, transparent updates, and aligning expectations early with stakeholders. Keeping lines of communication open helps build trust consistently.

[2.] Which principle challenges me the most, and why?

Example Answer:

Relentlessly Reassess (R) challenges me the most because it is easy to get caught up in executing the initial plan. Continuously monitoring progress with feedback loops and rapidly adapting plans when conditions change requires constant discipline rather than sticking to a fixed routine.

[3.] How can I apply the M.O.R.E. framework in my next project to maximize value?

Example Answer:

I will **Manage Perceptions** by establishing regular stakeholder alignment meetings to keep expectations clear.

I will **Own Project Success** by taking personal responsibility for value delivery instead of shifting blame for setbacks.

I will **Relentlessly Reassess** by setting up active feedback loops to catch risks and adapt quickly.

I will **Expand Perspective** by linking immediate project deliverables directly to long-term enterprise goals and business strategy.
