

The five major **Project Management methodologies** —

1. **Waterfall**
2. **Agile**
3. **Scrum**
4. **Kanban**
5. **Hybrid**

Waterfall

Approach: Sequential and linear — each phase must be completed before the next begins.

Best For: Projects with clear, fixed requirements and minimal expected changes.

Strengths: Predictable timeline, detailed documentation, easy progress tracking.

Limitations: Inflexible to change; late discovery of issues.

Agile

Approach: Iterative and adaptive — work delivered in short cycles (sprints).

Best For: Dynamic environments where requirements evolve.

Strengths: Flexibility, continuous feedback, faster delivery of value.

Limitations: Requires strong collaboration and disciplined teams.

Scrum

Approach: Agile framework emphasizing teamwork, accountability, and iterative progress.

Key Roles: Product Owner, Scrum Master, Development Team.

Strengths: Clear structure, daily communication, rapid adaptation.

Limitations: Can be challenging for large or distributed teams.

Kanban

Approach: Visual workflow management using boards and cards.

Best For: Continuous delivery and process optimization.

Strengths: Transparency, efficiency, easy prioritization.

Limitations: Less structured for complex projects requiring strict timelines.

Hybrid

Approach: Combines Waterfall's structure with Agile's flexibility.

Best For: Organizations needing both predictability and adaptability.

Strengths: Balanced control and responsiveness; tailored to context.

Limitations: Requires careful integration of both methods.

Methodology Comparison

<u>Methodology</u>	<u>Workflow Style</u>	<u>Best For</u>	<u>Key Strengths</u>
Waterfall	Linear, sequential phases	Predictable projects with fixed scope	Clear structure, strong documentation
Agile	Iterative cycles	Dynamic projects with evolving requirements	Flexibility, rapid feedback
Scrum	Sprint-based iterations	Team-driven development	Collaboration, accountability
Kanban	Continuous visual flow	Ongoing process optimization	Transparency, efficiency
Hybrid	Structured + iterative	Mixed environments needing balance	Flexibility with control

✨ — Each methodology offers unique advantages:

- **Waterfall** ensures structure,
- **Agile** drives adaptability,
- **Scrum** fosters collaboration,
- **Kanban** enhances visibility, and
- **Hybrid** blends the best of both worlds.
