

Business Analyst Life Cycle

BA engages from project initiation to closure, ensuring alignment between business needs and technical delivery. This Life Cycle ensures that every project moves from vision to validation in a structured way, balancing business goals with technical execution.

Initiation → Planning → Analysis → Design → Implementation → Testing → Closure

Each arrow represents progression and feedback loops, ensuring continuous stakeholder engagement and alignment.

Initiation

Identify business problems or opportunities, define scope, and engage stakeholders for initial requirements.

Definition: Identifying business problems or opportunities.

Activities: Define scope, objectives, and engage stakeholders.

Outcome: Clear project vision and alignment.

Planning

Develop requirement gathering strategies, plan workshops and interviews, and establish documentation standards.

Definition: Preparing strategies for requirement gathering.

Activities: Workshops, interviews, surveys, documentation standards.

Outcome: Roadmap for analysis and documentation (BRD, FRD, SRS).

Analysis

Gather detailed requirements, perform SWOT and GAP analysis, validate feasibility, and prioritize needs.

Definition: Detailed requirement gathering and evaluation from stakeholders.

Activities: **SWOT and GAP Analysis.**, feasibility checks, prioritization.

Outcome: Validated and prioritized requirements.

Design

Translate requirements into system specifications, create use case diagrams and user stories, and collaborate with developers.

Definition: Translating requirements into system specifications.

Activities: **Use Case Diagrams, User Stories**, collaboration with architects and developers.

Outcome: Blueprint for development teams.

Implementation

Support development teams with clarifications, ensure alignment with business needs, and update documentation as needed.

Definition: Supporting development teams with requirement clarifications.

Activities: Aligning technical build with business needs, updating docs as changes occur.

Outcome: Functional system aligned with requirements.

Testing & Validation

Use traceability matrix to validate coverage, facilitate user acceptance testing, and confirm deliverables meet requirements.

Definition: Ensuring deliverables meet requirements.

Activities: **Traceability Matrix** to ensure coverage,
Facilitate UAT (User Acceptance Testing), defect resolution.

Outcome: Verified solution ready for deployment.

Deployment & Closure

Support deployment, document lessons learned, and ensure business objectives are met and signed off.

Definition: Finalizing and closing the project.

Activities: Deployment support, Support rollout and training, Document lessons learned.

Outcome: Signed-off project meeting business objectives.

Business Analyst Life Cycle – (Seven Phases)

The BA Life Cycle flows from;

✨— This chart shows the **continuous lifecycle** of a BA project. This ensures that every solution is **strategically aligned, technically feasible, and validated for business value.**
